

ACADEMIC WRITING USING LITERATURE TO DEMONSTRATE CRITICAL ANALYSIS

Whitehead () notes an assumption that nursing students quickly acquire competence in academic writing but numerous studies show that.

Further examples of critical writing can be found on the UniLearning Website. Example: Some research may be biased in its structure. The difference between descriptive writing and critical writing With descriptive writing you are not developing argument; you are merely setting the background within which an argument can be developed. Just as you have used paragraphs on a micro scale to present your critical writing, so you need to consider the ordering of those paragraphs within the overall structure. Example: Limitations can also arise if there is a limited range of participants. Try to get into the habit of writing critically, by making sure that you read critically, and that you include critique in your writing. Sometimes a generalised, sweeping statement can slip through: the kind of statement that might be acceptable on conversation, but not in academic writing. Example: There would be limits to applicability if long term effects have not been tested. Below are some written examples of the observations a critical reader may make whilst commenting on various issues in text. There are a number of inherent methodological difficulties in evaluating treatment efficacy in this area, and this has contributed to controversy within the research literature surrounding treatment outcomes for this group of offenders Marshall, With critical writing you are participating in the academic debate. Indeed, a significant proportion of offences committed by offenders are either unreported, or do not result in the offender being convicted Abel et al. You will need to: consider the quality of the evidence and argument you have read; identify key positive and negative aspects you can comment upon; assess their relevance and usefulness to the debate that you are engaging in for your assignment; and identify how best they can be woven into the argument that you are developing. Strategic use of paragraphs There are several ways in which you can use the paragraph to enhance your critical writing. Contact Examples of critical analysis Part of becoming a successful critical reader is being able to translate the thoughts you had whilst reading into your writing. While the results might provide some insight, these answers will also likely have some limitations. A certain amount of descriptive writing is needed to establish for example: the setting of the research; a general description of a piece of literature, or art; the list of measurements taken; the timing of the research; an account of the biographical details of a key figure in the discipline; or a brief summary of the history leading up to an event or decision. Example: Methodological limitations Researchers may simplify the conditions under which an experiment occurs, compared to the real world, in order to be able to more easily investigate what is going on. Example: Correlation vs. This study guide gives ideas for how to improve the level of critical analysis you demonstrate in your writing. It is also a way of checking that, when your reader comes to the end of your writing, the conclusions make sense, rather than being a surprise, or an unconvincing leap of logic. The kinds of questions that might be useful to ask at that stage are: What is the balance between descriptive and critical writing? The aim is to lead your readers carefully through the thread of your argument, to a well-supported conclusion. A critical read through your own writing may reveal gaps in your logic, which you can rectify before you submit it for the critique of others.
